

# CA IT Asset Manager: SAM 4.1 License Foundations 200

## Course Overview

IT departments are constantly being forced to do more with less, including IT software assets. Governing many of these software assets are contracts, such as maintenance, warranties, and lease agreements. Left unmanaged, these assets can consume a significant amount of an organization's IT budget and expose it to considerable risk.

CA IT Asset Manager 14.1 (CA ITAM) is a comprehensive solution to handle software license management challenges through its Software Asset Manager 4.1 (SAM) capabilities. By managing software assets using SAM, you can reduce costs and minimize risk.

In this course, you will be taught to understand license management fundamentals and functions, register licenses and perform other license tasks, and enforce license compliance.

This class consists of 6.5 hours of SELF-DIRECTED learning including lab activities.
