

CA Mobile App Services 1.2: New Features 200

PRODUCT RELEASE

CA Mobile App Services 1.2

Course Overview

With the veritable explosion of mobile technology, the rise of the cloud, and the emergence of the Internet of Things, the enterprise today is being forced to expose data once considered sacred to a shareable asset outside the organization. The CA API Management suite provides enterprises with a comprehensive set of solutions that externalize the data and services exposed by APIs in a secure, reliable, and manageable way.

Enterprises of all sizes and shapes have been mobilizing their app assets in the quest for productivity gains and improved customer satisfaction. As complexity grows, apps take longer to bring to market and might be only supported on one platform. However, users want these apps quickly and on many different platforms.

CA Mobile App Services tackles the challenges of accelerating your IoT and mobile app projects by offering pre-defined sets of services, exposed as APIs and SDKs. This offering enables you to develop apps quickly, extend existing enterprise assets, and gain granular control using industry-leading API management and security capabilities of CA API Management. In this course, you will quickly become familiar with the new features of this CA API Management product.

COURSE TYPE, LENGTH & CODE

- Web-based Training (WBT)
- One (1) Hour
- 40API20330

PREREQUISITES

- Working knowledge of CA API Gateway 9.1 and CA Mobile API Gateway 3.2

What You Will Learn

- Understand which products are compatible with CA Mobile App Services 1.2, which enables you to determine which environments are necessary to run it
- Identify the enhancement made to the installer, which enables you to install multiple instances of CA Mobile App Services
- Identify new support for Apache Cassandra databases, which enables you to easily save the new schema to an existing Apache Cassandra keyspace and use an Apache Cassandra database as an OTK database
- Identify the changes that were made to the way data is stored, which enables you to now create private cloud data storage for each user
- Identify the finer level of permissions that are now available for SCIM operations, which enables you to more easily create an app with more granular access control for user and group management
- Gain an insight into the enhancements to the developer documentation, which enables you to more easily access the information you want, when you need it freedom to suit your needs

WHO SHOULD ATTEND

- Implementation Consultant
- Security Administrator
- Service Support Manager
- System Administrator
