

CA Live API Creator 3.0: New Features 200

PRODUCT RELEASE

CA Live API Creator 3.0

Course Overview

Because of the competitive pressures rising from the application economy, enterprises need to develop API-based apps faster, unlocking stagnant value from data stores and legacy applications. Application development is being driven toward DevOps processes and microservices architectures that break monolithic applications into logical components that can be continuously developed and deployed for new projects. Big data and IoT are driving the explosion of data that needs to be collected, selectively exposed, and then monetized to create new business models. Today's enterprise, as it embraces digital transformation, needs to address these challenges to move forward.

With CA Live API Creator, you can create APIs from legacy and modern data sources and apps, significantly remove cost and time from the development process through automation and business logic enforcement. CA Live API Creator enables the rapid creation of application back-ends for internal applications, mobile development projects, data-as-a-service exposure, IoT enablement, and partner integration. It permits the decomposition of large applications into self-contained units containing everything necessary for app delivery: data integration, business logic, and a robust API interaction layer. And it does all this in minutes rather than months. In this course, you will quickly become familiar with the new features available with CA Live API Creator 3.0.

COURSE TYPE, LENGTH & CODE

- Web-based Training (WBT)
- One (1) Hour
- 40API20370

PREREQUISITES

- Working knowledge of CA Live API Creator 2.x

What You Will Learn

- Understand that by creating managed data servers and data sources you can simply create databases, tables, and columns to easily publish APIs
- Identify how to you can connect to Salesforce data sources, which enables you to easily manage Salesforce data
- Identify the enhanced support for XML, which enables you to send data to API Creator using the XML format
- Identify the addition of a JavaScript debugger, which enables you to debug your rules, including events and JavaScript libraries
- Understand the new developer features in CA Live API Creator, which enables you to more efficiently write code
- Gain an insight into the enhancements to the product documentation, which enables you to more easily access the information you want, when you need it

WHO SHOULD ATTEND

- Implementation Consultant
- IT Security Manager
- IT Facility Coordinator
- Infrastructure Engineer
- Database Administrator
- API Owner/Administrator

For Managers

CA Live API Creator can dramatically reduce manual API creation and orchestration time and costs, facilitate your enterprise to create more APIs faster, and drive data-driven web, mobile, and composite apps. It also enables companies that have embraced API Management to expand the scope of their API lifecycle beyond management and enforcement in existing gateway and portal offerings towards the creation of APIs closer to the data layer. In this course, your team will be able to quickly become familiar with the new features available in CA Live API Creator 3.0.

Course Agenda

Module 1: Describe New Features and Enhancements	
<ul style="list-style-type: none">▪ Describe managed API▪ Describe the support for Salesforce data sources▪ Identify the enhanced support for XML▪ Examine the JavaScript debugger▪ Describe developer improvements▪ Describe the enhanced documentation
