

CA Release Automation Continuous Delivery Edition 6.x: ALM Integrations 200

Course Overview

CA Release Automation Continuous Delivery (CD) Edition is an advanced module that offers a single, “big picture” control point of the release pipeline for executing multi-team, multi-application releases. Application lifecycle management (ALM) tools are easily integrated, helping to accelerate the feedback loop and scope future app features. ALM integration enables development teams to automate the tracking of Agile project information within and across application releases and deployment environments.

PRODUCT RELEASE

CA Release Automation
Continuous Delivery Edition 6.2

COURSE TYPE, LENGTH & CODE

- Web Based Training (WBT)
- 45 minutes
- 88CDE20050

PREREQUISITES

- Web-based Training (WBT)
- 45 minutes
- Course Code:
88CDD10100

WHO SHOULD ATTEND

- Cloud Architect
- DevOps Automation Engineer
- Integration Specialist
- Release Manager

What You Will Learn

- Integrate CA Release Automation CD Edition with CA Agile Central
- Integrate CA Release Automation CD Edition with Atlassian JIRA

For Managers

When your staff can integrate CA Release Automation CD Edition with application lifecycle management (ALM) tools, they can automate the updating of content and track the progress of project content across phases and releases.

Course Agenda

Module 1: Perform ALM Integrations

- Describe CA Release Automation Continuous Delivery Edition
- Perform CA Agile Central Integration
- Perform Atlassian JIRA Integration
