

OnDemand CA Process Automation 4.x: Introduction to Solution Suite 200

PRODUCT RELEASE

CA Process Automation Solution Suite 4.3

Course Overview

No need to wait for scheduled classes...the classroom comes to you. Get engaging rich content equal to classroom training from your office or home. Experience interactive lab simulations with "See It," "Try It" modes. Based on real world "use cases," you can extend your learning experience to practical, on the job performance. OnDemand is a powerful tool to train employees to use enterprise software as it:

- Reduces or eliminates vital staff 'out of the office' time to attend classroom training
- Convenient 60 day access to content, multiple times when and where you want
- 'Just in time' task based modules enable you to learn exactly the skills you need at exactly the time you need it

This course covers the development, management and use of automated solutions based in the CA Process Automation Solution Suite product.

COURSE TYPE, LENGTH & CODE

- OnDemand Training
- 2.5 Hours
- 88PAM20120

PREREQUISITES

- Familiarity with software development concepts
- Familiarity with business system computer architecture
- CA Process Automation: Foundations 200

What You Will Learn

You will learn the elements and architecture of a CA Process Automation Solution Suite solution and how this is different from a "traditional" CA Process Automation solution. You will discover the various user interfaces from the point of view of a developer, administrator and end user. You will also see the solution life cycle from development to deployment to revision and upgrade. Administrators will learn how to monitor and control solution requests using activity logs and Solution Server features.

Course Agenda

WHO SHOULD ATTEND

- Solution Developer
- Solution Administrator
- Implementation Consultant

RECOMMENDED NEXT COURSES

- CA Process Automation: Designer 200

Module 1: Describe CA Process Automation Solution Suite

- Describe the purpose of Process Automation Solution Suite (PASS)
- Compare PASS to Process Automation (PAM)
- Describe the PASS architecture
- Describe PASS installation
- Describe PASS security (EEM through PAM Orchestrator)

Module 2: Build a Solution

- Describe a solution
- Describe PASS Studio
- Describe solution entities
- Describe solution activities

Module 3: Manage a Solution

- Export a solution
- Install a solution
- Set configuration settings
- Upgrade a solution
- Monitor solution activity
