

CA Release Automation 5.5.x: System Administration 300

PRODUCT RELEASE

CA Release Automation 5.5.x

COURSE TYPE, LENGTH & CODE

- Web-based Training (WBT)
- 15 minutes
- 88RLA20140

PREREQUISITES

- OnDemand CA Release Automation 5.5.x: Application Design 200
Eight (8) Hours
88RLA20120
- OnDemand CA Release Automation 5.5.x: Deployment Fundamentals 200
Four (4) hours
88RLA20130

WHO SHOULD ATTEND

- Cloud Architect
- DevOps Automation Engineer
- Integration Specialist
- Release Manager

Course Overview

This course is designed to provide students with knowledge about designing for and incorporating rollback plans into CA Release Automation deployments. Students will learn how to choose the rollback invocation type and incorporate rollback plans into a deployment plan, considerations for using rollback plans and defining post deployment plan options, how to invoke a rollback plan for a failed deployment, and how to further augment the rollback functionality that is part of the deployment process with supplied CA Release Automation actions that should be considered and defined in the design process.

What You Will Learn

- Define environment or template level invocation settings for rollback per application or environment
- Define rollback plans to individual deployment plans
- Invoke a rollback plan when a deployment fails
- Consider the enhanced flexibility and functionality of using CA Release Automation rollback actions as part of the application design process

For Managers

CA Release Automation is an enterprise-class, continuous delivery solution that provides powerful features as they relate to rollback activities within a single deployment. The CA Release Automation 5.5.x: Rollback Plans 200 course gives your staff the knowledge and skills they need to define and invoke the power of well-designed rollback activities when deploying key applications through CA Release Automation.

Course Agenda

Module 1 – Configure Rollback Plans

- Describe rollback plans
- Configure rollback plans
