

CA Release Automation 6.x: Installation and Configuration 200

Course Overview

This CA Release Automation Installation and Configuration training course is designed to provide students with the knowledge required to install CA Release Automation in various configurations on multiple platforms. In addition to installation information, the course covers agent installation, post-installation configuration, a log file review, and instruction on integrating CA Release Automation with Active Directory.

PRODUCT RELEASE

CA Release Automation 6.2

COURSE TYPE, LENGTH & CODE

- Web-Based Training (WBT)
- Two (2) Hours
- Course Code:
88RLA20290

PREREQUISITES

- (optional) OnDemand CA Release Automation 6.x: Overview 100
15 minutes
88RLA10310

WHO SHOULD ATTEND

- Integrators
- IT Experts
- System Administrators

What You Will Learn

- Identify installation prerequisites
- Install CA Release Automation
- Configure CA Release Automation
- Identify log files
- Configure integration to Active Directory

For Managers

In this course, your staff responsible for installing and configuring CA Release Automation will learn to efficiently install and configure the product while avoiding common installation and configuration mistakes. More efficient configuration leads to your software development team being about to make use of CA Release Automation more quickly, enabling continuous delivery across the application lifecycle.
