Delivery Method: Virtual Instructor-led Training
Duration: 3 Days
Course Code: 88RLA20031
- Experience with CA Release Automation (RA) and subject matter expertise on a specific

Course Overview

CA Release Automation provides our customers with a way to simplify, standardize, and execute application releases with fewer errors. With CA Release Automation, you can improve business and operational agility by cutting release times and centralizing application operations from development to production. In a nutshell, CA Release Automation enables continuous delivery across the application lifecycle.

CA Release Automation's capabilities can be extended through Action Packs that enable customers to easily automate and integrate with leading third-party solutions. In this course, you will learn about the CA Release Automation Rapid Development Kit (RDK), a complementary tool that enables users to quickly create Action Packs without having to write Java code.

What You Will Learn

- RDK Installation on Windows and Linux
- RDK Workflow
- CLI and Script Action
- RESTful Action
- Exporting and Deploying Action Packs

For Managers

Enable your team to rapidly extend CA Release Automation's orchestration capabilities by creating reusable actions that abstract API complexity from end-users.

application or system that
needs to be orchestrated
through RA

- Scripting knowledge (cmd.exe, bash, PowerShell, VBscript, Python, etc.)
