

CA Configuration Automation r12.7: Getting Started 200

PRODUCT RELEASE

CA Configuration Automation
r12.7

COURSE TYPE, DURATION & COURSE CODE

- Web Based Training
- Duration 1.5 hours
- Course Code: 22CCA20200

WHO SHOULD ATTEND

- Configuration Manager
- Network Administrator
- Technical Support Analyst
- Application Architect
- System Administrator

Course Overview

Managing and tracking IT resource configurations in an increasingly complex IT environment is one of the toughest challenges facing IT operations today. This complexity is against a backdrop of an expanding list of regulatory compliance mandates with legal and financial implications for the business as well as for IT operations. CA Configuration Automation addresses these challenges with an integrated solution for configuration change and configuration compliance management, which helps you implement best-in-class compliance programs in physical and virtual IT infrastructures.

In this course, you will examine the core functionality and architectural components of the product, discover how the different components are installed, and identify the key features of the browser-based UI. By attending this class, you will understand how CA Configuration Automation can automate resource-intensive and error-prone configuration and compliance management processes in the data center, which can help you increase operational efficiency, enforce compliance policies, and reduce risks.

What You Will Learn

- Identify the key product functions and architectural components that work together to automate configuration management tasks.
- Describe the correct installation of the product components for a successful implementation.
- Identify the key features of the browser-based interface so you can implement the product functionality more efficiently.

Course Code: 22CCA20181
Three (3) Days

For Managers

One of the critical challenges for IT today is to ensure continuous compliance with internal IT configuration policies and to support best-practice configuration change management processes that improve IT service availability and reduce outages caused by configuration errors. CA Configuration Automation can help you meet this challenge by improving operational efficiencies, enforcing compliance policies, and improving service availability.

In this course, your IT staff will be taught how to install the different product components. They will also cover core functionality, architectural components, and UI navigation. By attending this class, your IT staff will gain a solid understanding of the product functionality, interface, and installation, which will successfully prepare them for the CA Configuration Automation r12.7: Foundations 200 class.

Course Agenda

<p>Module 1 – Describe CA Configuration Automation Concepts and Architecture</p> <ul style="list-style-type: none"> ▪ Describe Current Configuration Management Challenges ▪ Describe the Capabilities, Benefits, and Key Features of CA Configuration Automation ▪ Describe the CA Configuration Automation Architecture 	<p>Module 2 – Describe the CA Configuration Automation Server Installation</p> <ul style="list-style-type: none"> ▪ Describe the CA BI Installation ▪ Describe the CA EEM Server Installation ▪ Describe the NDG Server Installation ▪ Describe the CCA Server Installation ▪ Describe the CCA Grid Node Installation
<p>Module 3 – Describe the CA Configuration Automation Agent Installation</p> <ul style="list-style-type: none"> ▪ Describe the Agent Installation Methods and Options 	<p>Module 4 – Navigate CA Configuration Automation</p> <ul style="list-style-type: none"> ▪ Describe CA Configuration Automation Navigation
